Unsafe Conditions in the Workplace Stats and Facts

FACTS

Facts of Unsafe Workplace Conditions

- 1. Defective equipment. This may include supplies and tools that are defective when they come from the manufacturer or have worn out over time and haven't been replaced or repaired.
- 2. Fall hazards. Slippery surfaces, as well as falls from ladders and elevations, can lead to fall accidents.
- 3. Fire hazards. This also includes objects or chemicals with a risk of explosion.
- 4. Inadequate guards. Guards need to be in place for inherently dangerous tools and machinery
- 5. Dangerous air conditions and toxic fumes. If the air is contaminated, employees run the risk of being exposed to severe respiratory issues and other diseases.
- 6. Lack of cleaning and improper housekeeping. If the workplace is dirty and unorganized, serious injuries are more likely.

STATS

- 4,836 workers died after suffering workplace injuries in 2015, (B.L.S.)
- The National Institute for Occupational Safety and Health (NIOSH) reports that another 50,000 workers died from illnesses and occupational diseases contracted at work.
